Major Changes in Support Requirements

Year	A	B	C	D	E
1966					
1967					
1968					
1969					
1970					
1975	Hold steady unless dis-				
1980	armament inspection treaty is concluded.**				

1. We expect an increase in operational support requirements arising from opportunities presented by expansion of tourist and business travel in the USSR. Local-area and route descriptions and other travel guidance studies will be required.
2. In response to the anticipated development of Soviet space weapons, research in geodesy is now shifting from its classical earthbound form to space geodesy and planetary mapping to assess Soviet capabilities to position space weapons to earth targets.
3. We expect research concerning intelligence on Soviet interests and activities in Arctic and Antarctic areas to continue at about the present rate. Research will be geared to a monitoring of evolving Soviet economic and political policies relating to Polar areas.

Computerized storage and retrieval of a rapidly increasing volume of data.

Comments: Projected program costs include an augmentation factor of 5 percent per year for anticipated increases in average salary levels.

25X1A1a

*

n 1967.

** The conclusion of a disarmament inspection treaty or a nuclear test ban inspection treaty would create new requirements for preparation, on extremely short notice, of numerous detailed intelligence reports on specific points and areas in the USSR and would necessitate manpower and data retrieval capability to meet these requirements.

DDI/BI

A-3

- I. Eastern Europe
- F. Geographic and Basic
- II. 1a, 1b, 1c, 1e, 1h

Program: To produce geographic intelligence in support of research, reporting, estimative and operational planning needs on Eastern Europe.

Major Changes in Support Requirements

Program Cost

Explanation of Major Program Changes

25X1A1a

Year	A	B	C	D	E
1966					
1967					
1968					
1969					
1970					
1975	Holds steady.				
1980	Holds steady.				

1. We expect operational support requirements to continue at about the same tempo as in recent years. Research tasks will probably require more detailed information, including more sociological data, on smaller areas, involving greater problems of information storage and retrieval.
2. Support to national estimates and policy formulation will probably likewise continue at the same tempo with only the area of the activity varying. We expect more interest to be directed toward how best to utilize the tendencies toward independence within the Bloc.
3. Scientific and military/economic intelligence activities will require more geographic research support; precise locational data is a present problem; analysis of Bloc utilization of grids and predicting patterns of deployment may be important future tasks.

Computerized storage and retrieval of a much greater volume of information than present or projected manpower could handle normally.

Comments: Projected program costs include an augmentation factor of 5 percent per year for anticipated increase in average salary levels.

* Ad hoc personal service contract consultations.

PROGRAM

DDI/BT

A-3

I. China

F. Geographic and Basic

II. la, lb, lh, 2a

Program: To produce and maintain an all-source intelligence map series on Communist China for Community use in basic reference, research, training, and operational planning tasks.

Year	Program Cost					Explanation of Major Program Changes	Major Changes in Support Requirements
1966	25X1A1a	A	B	C	D	E	1. This program, resulting from USIB approved recommendations, is conducted jointly with DIA and begins in FY66 and will proceed thereafter in accordance with agreed production schedules. It will require a substantial buildup in research staff trained in East Asian geography and area studies.
1967		-	-				2. By the end of FY68, mapping of the more densely populated areas of China is expected to be complete. The shift to work on less densely populated areas will permit a reduction in research inputs, with consequent reduction in manpower requirements in FY69.
1968		-	-				3. By middle of period 1971-75 the basic map series will be complete; the program thereafter will be devoted to production of <u>ad hoc</u> special sheets and to maintenance of regular sheets.
1969		-	-				
1970		-	-				
1975		Reduced to 3.5 manyears by middle of period.					
1980		Holds at 3.5 manyears.					

Comments: Projected program costs include an augmentation factor of 5 percent per year for anticipated increase in average salary levels.

See related USSR program.

*Covers cost of 6 new binocular microscopes that will be required, two in 1966, four in 1967. Assumes no technological developments that require conversion or replacement of present equipment.

DDI/BI

A-3

I. China and N. Korea
F. Geographic and Basic
II. Ia, Ib, Ic, Ie

Program: To produce geographic intelligence in support of research, reporting, estimative, and operational planning needs on Communist China and North Korea.

Program Cost					Explanation of Major Program Changes	Major Changes in Support Requirements
Year	A	B	C	D	E	
1966					1. We expect a steady increase in operational support requirements on Communist China into the 1971-75 period. [REDACTED]	1. Increased need for cartographic services; 25X1C. Slight increase in Chinese language training.
1967					2. Support to national estimates and policy formulation will similarly increase. We expect to expand work on population and ethnic groups and to undertake a wide range of briefing and intelligence reference aids. Provincial handbooks may be required to package and interrelate essential data needed for intelligence research, estimates, and operational planning.	
1968					3. Scientific and military/economic intelligence activities will require higher levels of geographic research support; we will accelerate basic research in the fields of Chicom geodesy, gravimetry, and cartography as they relate to target positioning,	
1969					supporting our in-house research with an external contract beginning in FY67.	
1970						
1975			Holds steady.			
1980			Drops off somewhat.			

Comments: Projected program costs include an augmentation factor of 5 percent per year for anticipated increase in average salary levels.

*Ad hoc personal service contract consultations.

II. 1c, 1d, 1e, 1f, 1h

Program: To produce geographic intelligence in support of research, reporting, estimative, and operational planning needs on Latin America -- Western Hemisphere.

Year	Program Cost					Explanation of Major Program Changes 25X6	Major Changes in Support Requirements 25X6
	A	B	C	D	E		
1966						1. We expect a steady increase in operational support requirements on those Latin American countries, [REDACTED] where an insurgency situation exists or appears to be developing. We anticipate an increased demand for support to country handbooks.	1. Increased need for cartographic support.
1967						2. Support to national estimates and policy formulation will probably increase. We will expand work on population and ethnic groups, and on the environmental characteristics of regions influenced or controlled by Communist elements.	2. Increased need for language training.
1968						3. We intend to initiate an external research program beginning in FY67 to build up essential geographic data on Latin American countries, with emphasis on ethnic groups; transportation facilities, especially in remote areas; natural vegetation; terrain; wildlife; and other environmental factors important to operational planning.	3. Increased need for translation services.
1969							
1970							
1975							
1980							
	Holds steady barring major upheavals.

Explanation of Major Program Changes

Major Changes in Support Requirements

Year	A	B	C	D	E	Explanation of Major Program Changes	Major Changes in Support Requirements
1966			-	-	-	1. Operational support requirements will probably remain at about this level unless unforeseen developments, such as a Communist takeover in Portugal, occur. Maintenance activities on a variety of programs continue.	Computerized storage and retrieval of a much greater volume of information than present or projected manpower could handle normally.
1967			-	-	-	2. Support to national estimates and policy formulation will probably continue at about the same pace. Problem areas like Cyprus require continual monitoring.	
1968			-	-	-	3. Scientific and military/economic intelligence activities are not likely to increase (or diminish) but they may bring renewed interest in resources of the sea (as oil in the North Sea) or in the physical properties of the sea (as in problems related to ASW).	
1969			-	-	-		
1970			-	-	-		
1975			Holds steady.				
1980			Holds steady.				

Comments: Projected program costs include an augmentation factor of 5 percent per year for anticipated increases in average salary levels.

1968					
1969					
1970					
1975				No Change.	
1980				No Change	

Additional capability is required in FY 1967 to support the Vietnam Staff and current intelligence production.

1. Increased NPIC support and PI training.
2. Increased support from ADP facilities.
3. Increased foreign language translation support.
4. Increased PSD support.

Comment: 1. Projected program costs include an augmentation factor of 5% per year for anticipated increase in average salary levels.
*2. One man-year above current T/O is added to implement this program.

Explanation of Major Program Changes

Major Changes in Support Requirements

<u>Year</u>	<u>A</u>	<u>B</u>	<u>C</u>	
1966				
1967				
1968				
1969				
1970				
1975	Continued improvement in computer application and machine utilization supporting techniques in cartography.			1. This program consists of two parts, a systems analysis study to develop a practical system of automating cartography, and the development of more efficient ways of performing technical cartographic and reproduction processes.
1980				2. It is estimated that by FY 1967 an in-house digitizer will be needed to supplement the compilation effort. At this stage of development, the Division will rely on computer support from OCS and data plotter assistance from OSA or NPIC. By FY 1970 this equipment should be procured for in-house use.
				3. Related cartographic requirements for indexing, cataloging, data banks, and other compilation and drafting aids will develop out of this system.
				4. Provision is made in this program to exploit current and future technical developments in drafting and reproduction.

Comment:

- Projected program costs include an augmentation factor of 5% per year for anticipated increase in average salary levels.

Approved For Release 2001/11/20 : CIA-RDP79-01154A000600080002-5
OFFICE OF BASIC INTELLIGENCE
PROGRAM

To provide a central authority for standardizing world-wide geographic names; support the production of basic intelligence, and direct the publication of the National Intelligence Surveys, gazetteers, and geographic studies.

DDI/BI

A-2

II. Intelligence Services (U.S.S.R.)
II. 2. a, b, g, i-k

Year	Program Cost				Major Changes in Support Requirements
	A	B	C	E(1)	
1966					1. Increased need for printing services with high speed equipment.
1967					2. Increased need for computer services.
1968					3. Increased need for specialized training.
1969					4. Increased need for specialized recruitment programs.
1970					
1975	continued expansion in ADP				
1980	modest expansion in ADP				

Comments:

1. Significant change in the techniques of printing will require a revision of existing procedures in geographic name research and in the methods for publishing the gazetteers, NIS, and other intelligence studies.
2. Projected program cost includes an augmentation factor of 5% per year for anticipated increase in average salary levels.

- (1) Includes contract cost for production of NIS Gazetteers as well as OBI printing cost for same.
(2) Does not reflect a program change, but a Gazetteer emphasis on this area in 1970.

II Intelligence Services (Worldwide)

II-2-c,r,s

Provide map reference services to the intelligence community.

Program Cost²

Explanation of Major Program Changes

Major Changes in Support Requirements

Year	A	B	C	D	E
1966					
1967					
1968					
1969					
1970					
1975	Continued Expansion				
1980	Continued Expansion				

1. Requests for reference services will increase rapidly, both in numbers of requests and quantities of materials. There has been an increase of 25% and 60% respectively over the past 15 years. More rapid response time will be demanded.
 2. Greater emphasis will be placed on selectivity and evaluation as part of the reference service. This will encompass needs as evidenced in ad hoc requests and evaluation support for specific internal and external research and operational problems.
 3. There will be greater utilization of the special all-source map facility as the activity of the all-source center increases and the product line available to the center expands.
 4. Greater emphasis will be given to better and fuller utilization of the inherent vast store of information available in map form.
 5. Far greater reliance will be placed on retrieval and servicing from microfilm images, utilizing accumulating stores of current and backlog data, and equipment that will become available. This will include requirements for both selective and total reproduction of large segments of the files.

1. Greater demands will be placed on Agency and all other cartographic production centers in the government, i.e. increased quantities and faster response. Increasing responsibility for evaluation.
 2. Will require special training and area specialization of reference personnel.
 3. Eventual full-time manning and general increase in reference activity will require additional personnel.
 4. Computer and EAM equipment support. Printing services and logistical support for graphics, displays and procurement.
 5. Better viewing and reproduction equipment, automated storage, retrieval, and reproduction equipment.

Comments: (Footnotes)

1. Treated separately as part of program for development of automated storage and retrieval system.
 2. Projected program costs also include an augmentation factor of 5% per year for anticipated increase in average salary limits.

PROGRAM

DDI/BI

A-2

II Intelligence Services (Worldwide)
II-2-m and r, t

To continue present efforts in cataloging, storing, and retrieving maps; and to develop and implement an automated system for the storage and retrieval of maps and geographic - environmental intelligence information.

Program Cost ⁷					Explanation of Major Program Changes	Major Changes in Support Requirements
Year	A	B	C	D	E	
25X1A1a	1966				1. The anticipated increase in map production, and corresponding increase in demand for map reference services, will require the continued application of the latest techniques and equipment available in the ADP field.	1. Increased need for selection, training and greater professional competency in ADP for indexing and data handling personnel.
	1967				2. Many conventional library indexing techniques will be replaced by evolving information handling techniques to provide a machinable input for an automated storage and retrieval system.	2. Increased requirement for computer and EAM equipment support.
	1968				3. Microfilm storage media will be adopted to save space and facilitate dissemination of all map materials available throughout the government. ⁴ Initial storage will be 35 mm film mounted in Mil-D aperture cards which will be punched and interpreted, and used for viewing, selection and reproduction. ¹	3a. Need for improved black and white viewing and printout equipment, i.e. greater resolution and more flexible size with variable magnification. ²
	1969				4. Accumulation of machine records evolving from indexing will be converted to magnetic tape for input to [redacted] Interface with [redacted] including conclusion of tentatively accepted coding compatibility, to assure [redacted] customers output of map bibliographic data, which, with specialized map reference assistance and automated retrieval of maps from the Map Library, will provide more comprehensive service.	3b. Requirement for rapid color printout equipment - R & D will be necessary. ³
	1970				5. Catalog card file, and other conventional library tools will be replaced, as computer records are accumulated, by book catalogs, specialized area and subject bibliographies, listings of maps for use in collection programs, and creation of special holdings of microfilm images for de-centralized use in the U.S.	4. Increased computer time in relation to [redacted] requirements, and, independently, to [redacted] oriented map customers.
1975	Continued expansion	25X1A2g				5. Increase computer and printing time and support.
1980	Continued expansion	25X1A2g				6. Covered in requirements cited above.

II Intelligence Services (Worldwide)

II-2-m and r, t (Continued)

Explanation of Major Program Changes (Continued)

6. An automated, all-source, geographic-environmental intelligence information center will be established to support geographic research and cartographic production. This center will evolve from a consolidation and extension of existing reference holdings. Implementation will include direct ties and service capability with larger and more diverse data centers, [REDACTED]

25X1A2g

Comments: (Footnotes)

- 25X1A1a 1. It will require 3-5 years to convert backlog to microfilm and existing records to machinable form.
2. [REDACTED] included for cost of additional and improved viewing and view/print equipment for black and white.
3. R & D for study and 2-year program of development of rapid color print capability. Although color processing is being developed commercially none of the R & D is aimed at the special applications involved in this project. This will be primarily specialized equipment R & D.
4. Costs not calculated here, as the requirement could be met if automated card reproduction equipment is purchased by OCR to handle their considerably larger problem.
5. Continuing normal equipment purchases and initial purchase of color handling equipment developed during FY 67-68. Additions to this equipment will be purchased in FY 69-70.
6. [REDACTED] of this cost is for purchase of equipment for automated storage and retrieval of microimages. Demand for this type of equipment, and availability as shelf items, should coincide at this point.
7. Projected program costs also include an augmentation factor of 5% per year for anticipated increase in average salary limits.

VI Guidance (Worldwide)
11-2-o

Systematic and continuing inter-agency review and coordination of map exchanges and agreements, and map production assets and programs, to insure minimum duplication of effort, identification and action to close gaps in map coverage, and recognition of community intelligence needs as related to mapping.

Program Cost¹

Explanation of Major Program Changes

Major Changes in Support Requirements

Year	A	B	C	D	E	Explanation of Major Program Changes	Major Changes in Support Requirements
1966						1. Increased scope, priority and diversification of intelligence needs for maps will require a stronger role in recommending and coordinating inter-agency special subject and topographic map production.	
1967						2. We expect a further gradual re-alignment of map exchanges (initial activity in late FY-65), from separate bi-lateral arrangements between DOD agencies with foreign counterparts, to State arrangements that include interests of all civil and military agencies in the U.S.G.	
1968						3. DOD will make further efforts to arrive at joint mapping agreements with foreign agencies, particularly in Africa, Latin America and other under-developed areas. AN/USQ-28 (rapid mapping system - conventional) will become operational in FY-66, and will require complex negotiations, coordination and staffing to insure proper introduction into the foreign mapping scene.	
1969							1. Management must recognize and provide support at appropriate and necessary levels to insure that intelligence needs for maps are met.
1970							2. Increased professional support from MLD Desk Officers for Chief/MLD/BI [REDACTED]
1975		Level off					3. Same as above. Additional training and travel covered in other programs.
1980		Level off					25X1C
							25X1C

Comments: (Footnotes)

1. Projected program costs also include an augmentation factor of 5% per year for anticipated increase in average salary limits..

OFFICE OF BASIC INTELLIGENCE

Program: To correlate, edit, and review contributions to the interagency National Intelligence Survey Program -- a digest of basic intelligence, comprehensive in scope but selective in detail, required as a foundation for high-level operational planning, and for the development of foreign policy. Specifically, the Program provides the national basic intelligence required by policy makers and their staffs in the Department of State, Department of Defense, the Joint Chiefs of Staff, the military services and military commands, and other government agencies.

	Program Cost			Explanation of Major Program Changes	Major Changes in Support Requirements
	Year	A	B		
25X1A1a	1966			<p>1. As Communist China acquires greater stature and influence in Asia it can be expected that the flow of source material will increase (next 2-5 years) thus providing a basis for maintaining more up to date General Surveys and essential detailed NIS coverage.</p> <p>2. As U.S. strategy to combat the major threat to peace and U.S. national interests posed by an increasingly powerful Communist China becomes more clearly delineated (next 5-10 years), NIS "packaged" detailed units will be produced to fill the specific community needs for basic intelligence.</p> <p>3. More efficient NIS processing procedures coupled with technological advances in reproduction methods (over the 15-year period) would permit adequate coverage on China in general and frequent updating on the General Survey and detailed coverage of priority interest.</p> <p>4. External research - A phased increase in external research and production staffing for China, compatible with increased flow of source material on the area, will be accomplished over the 15-year period.</p>	<p>1. Requirements for advanced manuscript reproduction methods and printer services will increase significantly.</p>

1. Although the threat of Communism is expected to continue during the 15-year period, growing independence and increased cooperation with Western Europe should make the Eastern European Satellites less of a threat to U.S. interests. The frequency of NIS maintenance on these countries can therefore be correspondingly reduced.
 2. Within a 5-10 year Period a more comprehensive General Survey will provide the only coverage required on most Satellites.
 3. External research - Research and production staffs will be realigned to meet the reduced emphasis on Eastern European Satellites.

Comment: Projected Program costs include an augmentation factor of 5% per year for anticipated increase in average salary levels. In addition, a modest increase (about 5% over FY 66 totals) in total ED manpower and Non-USIB contract costs, spread over the 4-year period ending 1970, is included.

1980	" "			

1. The divided state of Vietnam appears likely to occupy much U.S. attention during the next 5 years, although presumably within that period either a military solution or a political settlement will resolve the situation. Nonetheless some increase in emphasis on the area early in the 15-year period is in order; this should provide for more frequent maintenance of the two General Surveys and of the applicable supporting units.
 2. Flexibility should be maintained in the event that a major power settlement removes the insurgency problem and lowers the priority of Vietnam as an intelligence target.
 3. External research - An increase in research and production staffs is planned, with a tapering off probable after the first 5 years of the period.

Comment: Projected Program costs include an augmentation factor of 5% per year for anticipated increase in average salary levels. In addition, a modest increase (about 5% over FY 66 totals) in total ED manpower and Non-USIB contract costs, spread over the 4-year period ending 1970, is included.

1968			
1969			
1970			
1975	level off		
1980	" "		

1. Continuing threats to political and economic stability indicate that frequent maintenance of General Surveys and some increases in supporting units will be necessary for adequate NIS coverage of the Middle East and South Asia. Expansion of detailed coverage on India seems necessary, with some flexibility being retained to meet changing situations in other countries.
2. All countries will have more comprehensive General Survey coverage, plus selected detailed units, within the 15-year period.
3. External research - Minor increases in research and production staffs appear necessary to meet increased production needs in the area.

1. Requirements for manuscript reproduction and printer services should gradually increase.

Comment: Projected Program costs include an augmentation factor of 5% per year for anticipated increase in average salary levels. In addition, a modest increase (about 5% over FY 66 totals) in total ED manpower and Non-USIB contract costs, spread over the 4-year period ending 1970, is included.

1. With its many newly independent countries, most of which are beset with the problems common to undeveloped nations, Africa holds a continuing high level of interest for U.S. planners and policymakers. Increased coverage should provide General Surveys for all independent African states plus the remaining colonies, as well as selected detailed units.

2. Coverage should increase steadily over a 5-10 year period, then continue steady for the next 5 years to provide early maintenance for rapidly changing situations.

3. External research - This emphasis on African production will require increases in research and, to some degree, production staffs.

Comment: Projected Program costs include an augmentation factor of 5% per year for anticipated increase in average salary levels. In addition, a modest increase (about 5% over FY 66 totals) in total ED manpower and Non-USIB contract costs, spread over the 4-year period ending 1970, is included.

- 25X1A1a
- 1. As developing countries, subject to the social and economic stresses that breed political instability, and the target of organized Communist subversion directed from Cuba, the nations of Latin America will need continued emphasis in NIS coverage and maintenance. Considerable flexibility in scheduling is indicated to provide expedited maintenance in areas undergoing changes in government and orientation.
 - 2. Within the next 5 years, initial General Survey coverage for all of Latin America and most of the Western Hemisphere should be effected, along with selected detailed coverage.
 - 3. External research - Staffing, both research and production will probably have to be increased slightly to handle the greater emphasis in Latin America.
 - 1. Increased requirements for manuscript reproduction and printer services appear likely.

Comment: Projected Program costs include an augmentation factor of 5% per year for anticipated increase in average salary levels. In addition, a modest increase (about 5% over FY 66 totals) in total ED manpower and Non-USIB contract costs, spread over the 4-year period ending 1970, is included.

OFFICE OF BASIC INTELLIGENCE

Major Problems and Proposals

The production mechanism for basic environmental research in the Intelligence Community should be reviewed with the objective of achieving a more meaningful and coordinated program which would lessen undesirable duplication and the diffusion of research effort. What appears to be required is the highest level management support in the legitimate exercise of the Agency's coordination role in this regard, with the Office of Basic Intelligence assuming the major role in the coordination of basic intelligence in the Community. To avoid unnecessary duplication of research effort, recognition must be given to the National Intelligence Surveys and such other special studies produced by OBI as the principal means of satisfying the Government's basic intelligence requirements. Timely NIS -- given greater flexibility in production planning -- and other basic studies tailored to specific national intelligence requirements -- are capable of providing better, more uniform environmental intelligence at an overall saving to the Intelligence Community. Consideration might be given to the establishment of a Basic Intelligence Committee of USIB. In any case, the most appropriate way of achieving our basic intelligence research objectives and resolving the two major problems of fragmentation and duplication appears to lie in a Community-wide coordinated approach to both the existing NIS Program and supplementary problem-oriented research studies undertaken under central authority.

The foregoing list of programs in geographic intelligence is too gross to bring out some trends and developments that will be of increasing importance in the Intelligence Mission. It may be expected, for example, that new types of environmental data will be required in increasing amounts and precision of detail for most of the earth's surface. These very data -- including everything from microclimatology through soil deposits to trail patterns and house types -- are among those most commonly ignored in traditional intelligence collection programs. Collection and collation of these data, as well as increasing quantities of sociological-anthropological data, are essential tasks if the Community is to fulfill its responsibilities. Additionally, attention must be given to the adequacy of staff at the analysis end of the environmental intelligence process in

~~SECRET~~

order to stay abreast of the increased workloads that will be forced by the increase in volume of data and number of world areas and intelligence problems to which geographic intelligence officers must be responsive. The whole spectrum of ethnic and sociological data needed for counterinsurgency support and the painfully detailed environmental facts demanded by operational planning (which may itself be directed at clandestine collection) is evidence of the urgency and the importance of the need.

It is generally understood that greater sophistication must be shown by the Intelligence Community in the analysis of problems bearing on the fields of anthropology, socio-psychology, and related fields. The Geography Division intends to increase attention to these subjects in their regional environmental settings in two ways. First, we intend to study and maintain research surveillance on ethnic sources of social and political stress and overt dissidence. There is insufficient coverage of this subject at present and it will be an important need in both Communist and non-Communist areas. Second, and consistent with the above, we hope to broaden our staffing with a few young specialists in these fields who also have backgrounds in geography.

The long-term focus of geography in intelligence will be essentially unchanged in terms of end users. We expect it to change considerably, however, in the amount and nature of detail required in research results, and in the numbers of priority requirements generated by U.S. security involvements overseas. The following list outlines important program developments that we anticipate which are not brought out by the Program statements in Section III:

Urban evasion and survival studies. We anticipate more frequent requirements for this kind of operations support, as distinguished from the classical focus on rural countryside.

Use in routine research of the data base provided by reconnaissance satellites. Effective utilization of this tool will absolutely require easy and quick access by individual analysts to reconnaissance results.

The development of a TW satellite capability for instantaneous reporting would have a major impact on the organization and methodology of research

2
Approved For Release 2001/11/20 : CIA-RDP79-01154A000600080002-5
~~SECRET~~

~~SECRET~~

and current-intelligence activities. Development of such a capability would involve large staff increases because the satellite would multiply opportunities for research and reporting rather than reduce the effort now required.

Requirements for an intelligence data base and expertise on the moon, with a requirement ultimately for similar competence on certain planets.

Success of the CIA-DIA intelligence mapping program for the USSR (now being extended to Communist China) leads us to anticipate the possibility that similar intelligence collation projects may be required for other areas, including many presently non-Communist areas, depending on the course of international developments. In general, as any nation increasingly acquires the characteristics of a "denied area", the potential need for such systematic intelligence mapping of that area increases.

There is little question but that there will be a steady, perhaps even dramatic, increase in demands for more rapid and comprehensive map reference services from the Map Library. This increase will derive from both the inherent demands on intelligence and an increased awareness and sophistication that is already noticeably developing in the expanding group of map users. We are recommending two basic steps that will be necessary to tool up to meet future demands: 1) the modest increases over the years in personnel; 2) full utilization of existing and future EAM and ADP techniques and hardware, including R&D in some technical areas, e.g., color reproduction, that do not seem to be receiving such attention in the common market.

With an anticipated increase in demands for basic intelligence, i.e., geographic and environmental data, as input for broader research and operational problems in the Community, far greater attention must be given to unique problems associated with the integrated handling of such data in a multitude of formats, e.g., conventional maps, orthophoto maps, photomosaics, infrared, radar, and more exotic imagery, and textual information. The collection of maps and related geographic intelligence must keep pace with the demands for quality products based on this type of data. The expected increase in map production by DoD agencies within 5 years will strain the capacity of the Map Library for the physical handling of such bulk. Miniaturization of this data, with associated automated storage, retrieval, reproduction, and bibliographic control, seems to offer the only solution.

Approved For Release 2001/11/20 : CIA-RDP79-01154A000600080002-5

Automatic data processing opens a new area of potential improvement in efficiency in the field of cartography. The art of map production will go through radical changes in the next 15 years; changes brought about by the machine ability to store and recall the bits and pieces of information necessary to depict a portion of the earth's surface in a graphic manner. ADP will not only promote the development of greater data accuracy, but, by eliminating repetitive processes, it also will enlarge the capability to produce more per unit of manpower in a shorter period of time. The problem of Management to adjust to the potential of ADP will be great. Continued emphasis on training programs to develop greater competence in research techniques and graphic presentation will be promoted to improve the effectiveness of thematic maps and graphics.

With regard to the publication process, ADP systems are now available that allow the analyst to feed material directly into the computer and to get printouts on a code command to the computer. Scanners are also available that will eliminate the need for the time-consuming proofreading. Project EPIC (Electronic Printing for Intelligence Composition) as now planned will provide the base for a much broader program which will allow for updating of all or parts of intelligence studies in a minimum of time by bypassing many of the present time-consuming operations. These systems will require new equipment and trained personnel to operate them. In order to meet our objectives, we must accelerate our pace in the ADP field by 1) converting to high-speed prototype setting equipment, 2) eliminating the costly time-consuming operation of typed-drafts of reports by using high-speed, tape-producing equipment that has quick and efficient tape correction capability, and 3) use of scanners which would reduce the need for the present slow method of proofreading. To implement this program will require extensive coordination with, and support by, all organizations concerned with intelligence production.

Long-range planning linking technical collection to intelligence production has been deficient. The development of various devices of intelligence collection has progressed at an accelerated rate with apparent unlimited funds and ready access to required personnel. On the other hand, the users of the information collected have, under stringent economy measures, been forced to give up personnel strength while being pressed to continue with improved quality and quantity of finished intelligence.

SECRET

Approved For Release 2001/11/20 : CIA-RDP79-01154A000600080002-5

Some of the more exotic products of advanced collection technology do not satisfy all of the requirements of intelligence production. Personnel resources that were removed to support collection have seriously affected the capabilities for carrying on basic research that is not serviced by the exotic products.

There is considerable doubt that, even though technology can produce photography of great detail and repetitive wide coverage, the intelligence producers actually need all of the information which it is possible to collect. It is certain that, with present limited capabilities already taxed by heavy intelligence production requirements, intelligence producers will be unable to fully utilize the products of new collection devices until the same interest and priority is given to building resources for intelligence production.

17 August 1965

MEMORANDUM FOR: Deputy Director, ORR

SUBJECT: Long-range Planning

We have reviewed and found to be satisfactory the attached program summary sheets on Cartography, Geographic Intelligence and the National Intelligence Surveys. The Map Library programs have been incorporated in the CGS collection program and overall storage and retrieval programs of common concern.

SECRETCARTOGRAPHY* -- LONG TERM PROGRAM

Program: To provide intelligence in graphic media on subjects of national security significance.

	Year	Program Cost (Dollars in Thousands)	Explanation of Major Program Changes				Major Changes in Support Requirements
			A	B	C	F	
25X1A1a	1966						1. Some increase in production is expected from the anticipated growth in requirements resulting from Soviet space activities and from expanded US collection activities. Soviet scientific and technical developments will step up demands for cartographic support of high level briefings.
	1967						2. There will be a greater need for cartographic support related to intelligence on Africa in support of NIS, current intelligence, policy support and para-military activities.
	1968						3. The cartographic program on Communist China will be expanded in line with USIB recommendations.
	1969						4. Additional cartographic capability will be required to support the Vietnam staff and current intelligence production on this area.
	1970						5. A program for automation of certain features of the compilation, drafting and reproduction phases of cartography will involve the cartographic staff in the R and D aspects of this program and in the preparatory build-up for implementation.
	1970-80	Moderate increase for computer applications					1. Increased support for NPIC and PI training for certain members of the Cartography staff. 2. Increased support from ADP facilities. 3. Increased support from foreign language translation services. 4. Some increase in Chinese language training. 5. Training for selected members of the staff in computer programming and ADP management. 6. Increased support from Office of Computer Services, OSA/DDS&T and NPIC in mechanization efforts.

* There are a number of Agency components engaged in simpler forms of graphic presentation; however, their work is not cartographic in the sense that term is used here and these other programs are not included as a part of these totals.

GEOGRAPHIC INTELLIGENCE -- LONG TERM PROGRAM

Program: To produce and coordinate geographic intelligence research on foreign areas in support of CIA operations and intelligence production and to participate with other agencies in the preparation of special maps for use throughout the government.

Year	Program Cost (Dollars in Thousands)					Explanation of Major Program Changes	25X1C	Major Changes in Support Requirements
	A	B	C	E	F			
1966						1. An increase in requirements for operational support is expected [REDACTED]		1. Need for computerized storage and retrieval of rapidly increasing volume of data.
1967						2. Requirements will increase for research in space geodesy and planetary mapping to assess Soviet capabilities to position space weapons.		2. After 1968 a decrease in support from OCR and NPIC can be effected as work is cut back on the all-source map series covering the USSR and China. From 1965 to 1968 an increase in support will be required on Communist China.
1968						3. Production and maintenance of the all-source map series on the USSR will require fewer resources beginning about 1969 as initial coverage is completed.		3. A small increase in Chinese language training will be needed.
1969						4. As result of USIB approved recommendations, a substantial build-up will be required to produce and maintain an all-source map series on Communist China. As work on more densely populated areas is completed by the end of 1968 the effort on this program will decline.		4. There will be an increased need for cartographic services.
1970						5. An increase in research on Communist China will be required for both operational and policy support.		5. Increased support from translation services will be required for a number of areas (e.g., Latin America).
1970-80	Level off					6. A greater effort will be called for in basic research in fields of geodesy, gravimetry and cartography on Communist China as related to target positioning.		
						7. An increase is expected in operational support requirements on a number of areas including countries of Latin America, Indonesia, Burma, and northeast Thailand. New environmental research will be required in support of clandestine collection and possibly para-military activity.		
						8. A greater external research effort on Africa will begin about 1967 to consist of field studies of physical geography, ethnic composition and urban areas.

NATIONAL INTELLIGENCE SURVEYS -- LONG TERM PROGRAM

Program: To carry out the responsibilities of the Director of Central Intelligence for production, coordination and maintenance of National Intelligence Surveys as directed in NSCID No. 3

Year	Program Cost (Dollars in Thousands)					Explanation of Major Program Changes	Major Changes in Support Requirements	
	A	B	C	E	F			
1966								
1967								
1968								
1969								
1970								
1975	Moderate increase (ADP)					1. The major change in the NIS program will be an increase in production of detailed NIS units on Communist China as that country acquires greater stature and influence in Asia and becomes a growing threat to world peace and US national interests. 2. An increasing flow of information, particularly on Communist China and the less developed countries of Asia and Africa, will permit better coverage of these areas; technological advances in reproduction methods and more efficient NIS processing procedures will permit the program to be more responsive to new incidents of Communist insurgency throughout the world. 3. The present program on the USSR, the Eastern European Communist countries, and Western Europe will remain adequate during the 15 year period. The emphasis of NIS production on these areas will continue to shift away from detailed NIS sections toward more comprehensive General Surveys. 4. There will be an increasing demand for more frequent maintenance of General Surveys on countries marked by political and economic instability, particularly in the Middle East, South Asia and Africa. 5. Within the next 5 years, initial General Surveys for all of the Latin American countries and most countries of the Western Hemisphere will be completed. Maintenance of these Surveys, thereafter, will be relatively frequent and scheduled in response to changing economic stresses and Communist subversive activities.		
1980	Moderate increase (ADP)						1. Increased production, particularly on Communist China and the African countries, will outweigh the decrease in production on other areas, and will require increased support for contributions from intelligence research; manuscript reproduction; and printers services. 2. A phased increase in external research will be required to handle the increasing flow of source material and the increase in production, particularly on Communist China and the African countries.
